

1. Install the latest version of PostgreSQL

- Link: <https://www.postgresql.org/download/>
- There will be a pop up to install additional software, but you can ignore this, and quit the step

- Configure the environment variable as follows

- Enter “psql --version” to check if PostgreSQL is working (psql is a command to interact with PostgreSQL on the terminal)

```
C:\Users\tsuis>psql --version
psql (PostgreSQL) 14.1
```
